I would like to know why there are no meetings scheduled in more widely distributed locations so that more of the people, taxpayers footing the bill, can be provided additional information so that our input can be more meaningful. The effects of the contamination are/will be widely distributed, so should the information outreach.

As far as these 31 sites, I urge you to adopt alternative number 3: Removal, Treatment, and Disposal. This should be coupled with careful, accurate monitoring.

Thank you for the opportunity to comment.

Don Stephens
